^{fourth}
Replace the ~~third~~ fully paragraph of page 16 with the
following:

ct.M
3/6/07

In use, the user maintains the grip of the laser and
depresses the button & 11 to activate or deactivate the
laser beam. The user is capable of seeing and feeling the
taper of surfaces 6 and 7 to determine that fingers are
being placed too closely to the laser beam. Accordingly,
it is improbable that actuating the laser beam will exposes
the gripping fingers or thumb of a user to direct contact
with the radioactive laser beam.
